2 Fiscal Year and Currency Used in Accounting

The Company's fiscal year starts on January 1 and ends on December 31.

The currency used for bookkeeping and presenting the consolidated financial statements is the Vietnamese Dong (VND).

3 Accounting Standards and Policies Applied

The Company applies the Vietnamese Accounting System for enterprises as guided by Circular No. 200/2014/TT-BTC dated December 22, 2014, and the Vietnamese Accounting Standards (VAS) issued by the Ministry of Finance. The consolidated financial statements are prepared and presented in accordance with the provisions of Circular No. 202/2014/TT-BTC dated December 22, 2014, issued by the Ministry of Finance.

4 Summary of Significant Accounting Policies

4.1

Basis of Consolidation

The consolidated financial statements are prepared by including the financial statements of the parent company and its subsidiaries.

Subsidiaries

A subsidiary is an entity controlled by the Company. Control exists when the Company has the ability, either directly or indirectly, to govern the financial and operating policies of the investee to derive benefits from its activities. The financial statements of subsidiaries are consolidated into the consolidated financial statements from the date the Company gains control until the date control ceases.

The financial statements of the Company and its subsidiaries used for consolidation are prepared for the same accounting period and consistently apply the same accounting policies. Adjustments are made for any differences in accounting policies to ensure consistency between the parent company and subsidiaries.

When the parent company disposes of its interest in a subsidiary without losing control, such transactions are accounted for similarly to equity transactions. If the disposal results in the loss of control, any gain or loss arising from the event is recognized in the consolidated income statement.

Intercompany balances, transactions, and any unrealized profits or losses arising from intercompany transactions between the parent company and subsidiaries are eliminated during the preparation of the consolidated financial statements.

Business Combination

The assets, liabilities, and contingent liabilities of a subsidiary are measured at their fair value at the acquisition date. Any excess of the purchase price over the aggregate fair value of the acquired assets is recognized as goodwill. Conversely, any shortfall between the purchase price and the aggregate fair value of the acquired assets is recognized in the income statement in the accounting period in which the acquisition takes place.

Recognition of Non-Controlling Interests

Non-controlling interests represent the portion of equity in the net assets of a subsidiary not owned by the Company and are presented as a separate line item under the equity section in the consolidated balance sheet. The value of non-controlling interests in the net assets of consolidated subsidiaries includes: Non-controlling interests at the acquisition date, determined based on the fair value of the subsidiary's net assets at the acquisition date. Non-controlling interests in changes in total equity from the acquisition date to the beginning of the reporting period. Non-controlling interests in changes in total equity arising during the reporting period. Losses incurred by a subsidiary must be allocated proportionally to the non-controlling interests, even when such losses exceed the non-controlling interests' share of the subsidiary's net assets.

Non-controlling interests represent the portion of profit or loss of a subsidiary not owned by the Company. This is determined based on the non-controlling interests' ownership percentage and the after-tax profit of the subsidiaries. It is presented as a separate line item in the consolidated income statement.

Associates

An associate is an entity over which the Company has significant influence but does not have control over its financial and operating policies. The consolidated financial statements include the Company's share of profit or loss from the associate, accounted for using the equity method, from the date significant influence begins until the date it ceases. If the Company's share of losses in the associate equals or exceeds the carrying amount of the investment, the carrying amount of the investment is reduced to zero, and the recognition of further losses is discontinued unless the Company has obligations to make payments on behalf of the associate.

4.2 Cash and Cash Equivalents

Cash equivalents are short-term investments with a maturity or redemption period of no more than three months from the date of investment, which are readily convertible to a known amount of cash and carry an insignificant risk of changes in value at the reporting date.

4.3 Financial Investments

Trading securities

Trading securities are securities and other financial instruments (e.g., promissory notes, forward contracts, swap contracts, etc.) held by the Company for trading purposes.

Trading securities are initially recognized at cost, which includes the purchase price plus any directly attributable acquisition costs such as brokerage fees, transaction costs, information provision fees, taxes, charges, and banking fees. Dividends or profits distributed for periods prior to the investment date are deducted from the investment value.

After initial recognition, trading securities are measured at cost less any allowance for a decline in the value of trading securities. An allowance for a decline in value is established at the end of the accounting period if there is clear evidence that the market value of the securities held by the Company has decreased below their carrying amount.

Loans

The allowance for doubtful debts reflects the estimated losses at the end of the fiscal year for loans that are overdue and have been subject to repeated collection efforts by the Company without success, or loans that are not yet due but where the debtor has declared bankruptcy, is undergoing dissolution procedures, has disappeared, or has absconded.

Equity Investments in Other Entities

Long-term equity investments in other entities refer to investments where the Company does not have control, joint control, or significant influence over the investee.

Long-term equity investments in other entities are recognized at cost, net of any allowance for impairment. Dividends or profits distributed in cash or non-cash forms for periods prior to the investment date are deducted from the investment value.

The allowance for long-term equity investments in other entities is determined as follows:

- For investments in listed shares or investments with reliably determinable fair values, the allowance is based on the market price of the shares.
- In cases where the fair value of the shares cannot be determined, the allowance is established based on the losses incurred by the investee.

For investee companies required to prepare consolidated financial statements, the allowance for impairment is established based on their consolidated financial statements. In other cases, the allowance is based on the investee company's standalone financial statements.

4.4 Receivables

Receivables include: Trade receivables (amounts due from customers) and other receivables.

- * Trade receivables represent commercial receivables arising from sales transactions between the Company and buyers.
- · Other receivables are non-commercial receivables that are not related to sales transactions or internal transactions.

Receivables are recognized at their original cost, net of an allowance for doubtful debts. The allowance for doubtful debts reflects the estimated losses at the end of the fiscal year for receivables that are overdue and have been subject to repeated collection efforts by the Company without success, or receivables that are not yet due but where the debtor has declared bankruptcy, is undergoing dissolution procedures, has disappeared, or has absconded.

4.5 Inventories

"Inventories are recognized at the lower of cost and net realizable value.

Inventories are accounted for using the perpetual inventory system, and their value is calculated using the weighted average cost method."

The cost of inventories includes:

- Raw materials and goods: include purchase costs, processing costs, and other directly related costs incurred to bring the inventories to their current location and condition.
- Finished goods: include direct material costs, direct labor costs, and directly related overhead costs allocated based on the normal level of operating capacity.

"Net realizable value is the estimated selling price less the estimated costs of completion and the estimated costs necessary to sell the inventory. An allowance for inventory devaluation is made for each item when its net realizable value is lower than its cost."

4.6 Tangible Fixed Assets

Historical Cost

"Tangible fixed assets are recorded at historical cost less accumulated depreciation.

The historical cost includes the purchase price and all costs incurred by the Company to bring the fixed asset to its current condition and location, ready for use. Subsequent expenditures are only added to the historical cost of the fixed asset if it is certain that these expenditures will increase the future economic benefits derived from the use of the asset. Costs that do not meet these conditions are recognized as expenses in the period."

Depreciation

Tangible fixed assets are depreciated using the straight-line method over their estimated useful lives. The depreciation period is in accordance with Circular No. 45/2013/TT-BTC dated April 25, 2013, issued by the Ministry of Finance.

The depreciation periods for tangible fixed assets at the Company are as follows:

Asset Type	Depreciation Period (Years)
Machinery and equipment	5 - 10
Transportation vehicles	6 - 10
Management tools and equipment	3 - 5
Other fixed assets	10 - 20

4.7 Intangible Fixed Assets

Historical Cost

"Intangible fixed assets are recorded at historical cost less accumulated amortization.

The historical cost of intangible fixed assets includes all costs incurred by the Company to acquire the intangible asset and bring it to a condition ready for use."

Amortization

Intangible fixed assets are amortized using the straight-line method over their estimated useful lives. The amortization period complies with Circular No. 45/2013/TT-BTC dated April 25, 2013, issued by the Ministry of Finance.

The amortization periods for intangible fixed assets at the Company are as follows:

Asset Type	Depreciation Period (Years)
Computer software	3

4.8 Prepaid Expenses

Prepaid expenses are classified into short-term prepaid expenses and long-term prepaid expenses. These are actual expenses that have been incurred but relate to the business operations of multiple periods. The main prepaid expenses at the Company are allocated to costs as follows:

- * Tools and instruments put into use are allocated using the straight-line method over a period not exceeding 3 years.
- Manuscript costs are allocated as long-term expenses over the effective period of the contract, based on the actual printed quantity and the specified contractual rate.
- Other prepaid expenses: Based on the nature and magnitude of the expenses, the Company selects an appropriate allocation method and criteria
 over the period in which the economic benefits are expected to be generated.

4.9 Liabilities

Liabilities include: Trade payables and other payables.

Trade payables are commercial payables arising from sales transactions between suppliers and the Company.

Other payables are non-commercial payables that are not related to sales transactions or internal transactions.

Liabilities are recognized at their original cost and are classified into short-term and long-term liabilities based on the remaining maturity as of the fiscal year-end.

Liabilities are tracked by the Company in detail by creditor, original maturity, remaining maturity, and original currency.

4.10 Accrued Expenses

Accrued expenses are recognized for amounts to be paid in the future related to goods and services already received, regardless of whether the Company has received the supplier's invoice.

4.11 Borrowings and Finance Lease Liabilities

"Borrowings and finance lease liabilities are recorded at their original cost and are classified into short-term and long-term liabilities based on the remaining maturity as of the fiscal year-end.

The Company tracks borrowings and finance lease liabilities in detail by creditor, loan agreements, original maturity, remaining maturity, and original currency."

Borrowing Costs

Borrowing costs include interest expenses and other costs directly related to the Company's borrowings. Borrowing costs are recognized as expenses in the period in which they are incurred, unless they meet the conditions for capitalization as specified in the Accounting Standard on "Borrowing Costs."

Borrowing costs related to a specific borrowing used exclusively for the purpose of investing in, constructing, or creating a qualifying asset of the Company are capitalized into the historical cost of that asset. For general borrowings, the amount of borrowing costs eligible for capitalization during the accounting period is determined based on the capitalization rate applied to the weighted average cumulative expenditure incurred for the investment, construction, or production of the qualifying asset.

The capitalization of borrowing costs is temporarily suspended during periods when the investment, construction, or production of a qualifying asset is interrupted, except when the interruption is necessary. The capitalization of borrowing costs ceases when the substantial activities necessary to prepare the qualifying asset for its intended use or sale have been completed.

4.12 Equity

Contributed capital reflects the actual amount of capital contributed by the shareholders.

Surplus equity

Share premium reflects the difference between the issuance price and the par value, net of direct costs related to the issuance of shares; the difference between the re-issuance price and the book value, net of direct costs related to the re-issuance of treasury shares; and the equity component of convertible bonds upon maturity.

Treasury Shares

Treasury shares reflect the amount paid to repurchase shares previously issued by the Company, along with any direct costs associated with the repurchase transaction.

Profit Distribution

The net profit after corporate income tax is allocated to funds and distributed to shareholders according to the Company's Charter or the Resolution of the General Meeting of Shareholders.

Dividends paid to shareholders shall not exceed the undistributed net profit after tax and must take into account non-cash items included in the undistributed net profit after tax that may impact cash flow and the ability to pay dividends.

4.13 Revenue and other income recognition

* Revenue from the sale of goods and the provision of services is recognized when it is probable that economic benefits will flow to the entity and the amount can be reliably measured, while also meeting the following conditions:

Revenue from the sale of goods is recognized when the significant risks and rewards of ownership of the goods have been transferred to the buyer, and there is no significant possibility of changes in the agreed-upon selling price or the possibility of returns.

Revenue from the provision of services is recognized when the service has been completed. In cases where the service is performed over multiple accounting periods, the revenue for each period is determined based on the percentage of completion of the service at the end of the accounting period.

 Revenue from financial activities is recognized when it is reasonably certain that the revenue can be determined and there is a possibility of receiving economic benefits from the transaction.

Interest income is recognized on an accrual basis, using the effective interest rate.

Dividends and profit distributions are recognized when the company has the right to receive the dividends or profit from its investments.

Other income refers to income derived from activities outside the company's core operations and is recognized when it can be reasonably determined and there is a likelihood of receiving economic benefits.

4.14 Cost of goods sold

The cost of products, goods, and services sold is recognized in the correct period, in accordance with the matching principle and the prudence principle.

Costs exceeding the normal level of inventory and services provided are recognized directly in the cost of goods sold for the period and are not included in the cost of products or services.

4.15 Financial expenses

Financial expenses reflect costs or losses related to financial investment activities: interest expenses on loans, payment discounts for buyers, provisions for impairment of trading securities, provisions for investment losses in other entities, and other expenses related to investment activities.

4.16 Selling expenses and administrative expenses

Selling expenses reflect the actual costs incurred during the process of selling products, goods, and providing services. Administrative expenses reflect the actual costs incurred related to the overall management of the business.

4.17 Current corporate income tax expense and deferred corporate income tax expense

Corporate income tax expense includes current income tax and deferred income tax.

Current income tax is the tax calculated based on taxable income for the period, using the tax rate effective at the end of the accounting period. The taxable income differs from accounting profit due to adjustments for temporary differences between tax and accounting, as well as adjustments for income and expenses that are either non-taxable or non-deductible.

Deferred income tax is determined for temporary differences at the end of the accounting period between the tax base of assets and liabilities and their carrying amounts for financial reporting purposes.

4.18 The tax rates and other fees paid to the state budget that the company is applying.

Value-added tax (VAT): A 10% tax rate applies to blocks, electricity sales, and solar panels; 5% applies to dictionaries and reference books that are not supplementary textbooks; textbooks and reference books supplementary to textbooks are exempt from VAT.

Corporate income tax: A tax rate of 20% applies, in accordance with Official Letter No. 1534/BTC-CST dated January 31, 2019.

Other taxes and fees are paid in accordance with current regulations.

4.19 Financial instruments

Initial recognition

Financial assets

At initial recognition, financial assets are recognized at cost, including any directly attributable transaction costs related to the acquisition of the financial asset. The Company's financial assets include: cash, short-term deposits, financial investments, receivables from customers, and other

Financial liabilities

At initial recognition, financial liabilities are recognized at cost, including any directly attributable transaction costs related to the issuance of the financial liability. The Company's financial liabilities include loans, payables to suppliers, accrued expenses, and other payables.

Subsequent measurement

Currently, there are no regulations regarding the subsequent measurement of financial instruments after initial recognition.

4.20 Related parties

Parties are considered related if one party has the ability to control (directly or indirectly) or exert significant influence over the other party in making decisions about financial and operating policies.
